Title of Mini Project: Online Resort Management

Abstract:

The online resort management project's main idea is to develop an online website as well as android application for atomization of the resort booking system and to create a scope for visiting tourists from different geographic locations. In a resort, there are different types of services and rooms so managing all these resorts information is difficult so it will be easy through this website and mobile app. This application will help to improve services for tourists and also improve the revenue source for resort management. This project is implemented in the web platform using HTML, JavaScript and CSS as web technologies, flutter for mobile application development and Google Firebase as a back end database.
